Avmor's Biomor[®] Line Makes Way!

Avmor recently launched Biomor[®], a bacteria based product line. Through a strategic joint venture with Novozymes Biologicals, the world leader in bacteria fermentation, Avmor Group has been given exclusive rights to the latest technology currently available in Canada. The Biomor Line consists of 6 cleaning solutions that degrade organic matter and eliminate odours at the source, all while protecting our workers and our environment. The product line consists of a floor degreaser, deodorizer for carpets and fabrics, industrial and concrete cleaner, drain maintainers, as well as a multi-purpose cleaner.

CUSTOMER TESTIMONIAL

Long term savings...Long-term deep cleaning...Reduced malodours...Traction improvement: These are just a few of the numerous benefits provided by Biomor A.S.A.P. Floor Degreaser. Do you want to rid your floors from accumulated grease, stains and grime? Look no further: **Biomor A.S.A.P. is the floor degreaser that is right for you.**

Mr. Marc Costandi, Avmor's Atlantic Sales Manager and Mr. Darrell Kline, Single-Source Sanitation Sales Manager have had the opportunity to present the Biomor Line to Mr. Max Graves, Operation Manager Crothall Services Canada at the IWK (Isaac Walton Killam) Health Center in Halifax, Nova Scotia. The hospital was having a difficult time trying to rid their floors from grease build-up and tried various types of degreasers; however they all provided minimal results. The grout on the hospital floors was dark and discoloured due to historic deposits of fats, oils and grease. ...“We were extremely impressed with the Biomor technology and decided to test “A.S.A.P. Floor Degreaser” on the hospitals kitchen floors,” Max Graves says. By using Avmor's recommended dilution ratio and by following a daily maintenance program astonishing results were seen within a few days. ...“we could visibly see the grease coming off the floors, it was almost as though the floor was leaching,” Max Graves notes. The hospital then performed a

deep scrub resulting in cleaner floors. Grease was no longer seen around floor drains, grates, and in the vicinity of wash down areas. The grime build-up in the kitchens hard to reach areas was slowly but effectively being eaten away. Biomor A.S.A.P. Floor Degreaser is a highly concentrated, neutral pH degreaser that is environmentally friendly, safe, and extremely effective. At the end of the first month, Crothall Services and IWK Hospital also noticed a significant reduction in the amount of fruit flies in the kitchen. A.S.A.P. also acted as a biological pest control by removing the fruit flies source of food, which were the historic deposits of grease found on the hospital floors. They are currently using the “Biomor Deodorizer and Cleaner for Carpets and Fabrics” and are particularly awed with its ability to eliminate odours at the source upon contact. Also being used by them is the “Biomor Heavy Duty Drain Maintainer”.
